DIVE NUMBER: 4

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Josue L.

Kelp Forest dive. Heavy, stringy, kelp that was, at times, hard to navigate. Nice dive with good visibilty and many large Sheepshead and Calico Bass. Very large Calico at the end of the dive. Octopus. Site located in the Blue Cavern MPA. I handled the kelp extremely well even as it was snagging and impeding my motion.

Surface Interval: 1h 8min

DIVE DETAILS

Maximum Depth:	17.5 meters
Bottom Time:	25 minutes
Dive Computer:	Yes

DIVE NUMBER: 3

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Josue L.

Nice dive along a shallow reef with stretches of sand. My 3rd Open Water dive. Good kelp. Octopus, small halibut, lobsters. Small school of bait fish transit across and surround us on the give. I did great on air and had excellent buoyancy control. Good site, would return for it's approachability, structure, and wildlife.

DIVE DETAILS

DIVE NUMBER: 119

OVERVIEW

Type: Ocean, Boat Dive (Panga)

Partner: Tobias N.

Fang Ming: Revenge of the Tortugas

Dove the Fang Ming, a Chinese fishing trawler that was confiscated and subsequently sunk by the Mexican Navy for illegal fishing and human trafficking. Wreck dive, max depth of 21.3 meters, bottom temperature 26 degrees. Landed in sandy bottom at 21.3 meters, starboard side of the wreck. Always odd to see a massive ship sitting on the bottom of the sea floor. Forward to the bow, covered in sea fans. Around the bow, down the port side and up to 18 meters. Penetrated the port side, moving athwartships, exiting the starboard. Interior encrusted, many fish. Torch on, Tobias expertly navigates his first wreck penetration. Re-enter the starboard side and begin to move aft through what was likely crew living space and fish processing area, many large fish hiding in the corners, schools for Cortez Rainbow Wrasse. Tobias, again expertly navigates a confined space with limited overhead. Exit onto the stern deck, cargo holds open. Turtles lounging on the aft deck now own the ship that once likely illegally hunted them. From the center of the aft deck over the port rail and forward to the pilot-house, slowly peeking over the port rail we spot a massive, male, green sea-turtle. A green eel pokes its head out of a port hole. Through the port pilot house door, which is very tight, I get stuck for a moment. We have to go single file through the small pilot house. Many small Jewelled Moray Eels throughout the wreck living in pipes and crevases. Out the starboard pilot house door and to the bow, anchor windlass still intact, more sea turtles, one lounging on the bow mast-head, which we get to briefly swim with. Amazing dive.

4.2 Dive 120: Isla Ballen Tail, Isla Espiritu Santo, BCS, MEX

DATE: 22 JUNE 2023

LATITUDE: 24°29'01.2"N

LONGITUDE: 110°24'31.9"W

DIVE NUMBER: 120

OVERVIEW

Type: Ocean, Boat Dive (Panga)

Partner: Tobias N.

Tail of the Whale: Tranquillo

Dove the western tail of Isla Ballena, a small island just south of Ensenada Candelero. Max depth 17.2 meters, bottom temperature 25 degrees. Landed in jumbled rocks, moving west along the sand-rock interface. Large school of Cortez Sea Chubs moving to deep water. Many nudibranchs, at least 4 types. Tobias observes a nudibranch, which is wrapped around a piece of seaweed, attack its own tail, extending its mouth onto itself. Giant Hawkfish. Green Eels. First part of the dive progresses like a cool sub-tropical Pacific dive, jumbled rocks, sea stars, sea cucumbers. As we ascend from 15 meters to 10 meters we pass through a sharp thermocline, schlerring, and the entire ecosystem transitions to a tropical environemnt, replete with colorful schools of fish and sand flats dotted by rocky outcrops. Stong current transitions the dive into a drift dive and we float, soar, along the sand flats observing the tropical aquarium.

4.5 Dive 150: Ripper's Cove, Catalina, CA, USA

DATE: 19 OCTOBER 2025

LATITUDE: 33°25'40.0"N

LONGITUDE: 118°26'04.6"W

DIVE NUMBER: 150

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Very nice dive in Ripper's Cove. Very enjoyable. Many, many fish. Excellent visibility. Descend to sand flats then west to fringing rock reef. Transited along rock/sand interface at 9 meters for most of the dive. Many lobsters. Horned Shark. Brief sighting of a larger shark moving from the reef edge to deep water along the sand, could have been a Leopard Shark, moving very fast. Leisurely, rewarding, dive that is very approachable. Dove the western part of Ripper's Cove at the point of the cove toward Empire Landing. Good diving from Asher, Amy, Tobais.

4.6 Dive 149: Africa Cove, Catalina, CA, USA

DATE: 18 OCTOBER 2025

LATITUDE: 33°27'23.0"N

LONGITUDE: 118°30'43.3"W

DIVE NUMBER: 149

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Asher N.

Classic, beautiful kelp dive. Very good visibility. Dove the western part of the cove. Initially was looking for the "pinnacles" of Africa Cove, but now believe they may be on the east side of the cove. Many lobsters. Horned Shark. Kelp much thinner than when we did this dive in August, typical late season thinning. Nice dive with excellent visibilty and many large fish. Good diving from Tobias, Asher, and Amy. Asher had a leaking regulator, that became problematic at the end of the dive. No safeyy concern.

Slightly overweighted.

4.7 Dive 145: Emerald Cove (East), Catalina, CA, USA

DATE: 31 AUGUST 2025

LATITUDE: 33°28'07.2"N

LONGITUDE: 118°31'32.8"W

DIVE NUMBER: 148

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Amy N.

Stunning dive along he eastern reef of Emerald Cove. Transited north from boat-mooring on row R, then east along the blue-water side of the reef and Indian Rock. Good visibility, lots of kelp and creatures. Nice current moving us along eastward. Very nice dive. Surprised a large Pacific Octopus ensconsed, openly, in a jumble of rock with overhead. Separately, saw octopus eggs in an encrusted glass jar. Many, many, fish. Horned shark. Extremely strong current as we tried to round Indian Rock on the east end. Current, which as counter to the current for most of the dive, was so strong, I aborted that portion of the dive plan and turned the team around and headed back west. Very nice dive. All parties did great in adverse conditions of strong current.

DIVE NUMBER: 144

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Amy N.

Kelp Forest dive. Thick, well channeled kelp. Classic, beautiful kelp dive. Nice dive with good visibilty and many large fish. Lobsters. Many cold lobes of water that were unexpected. Toward the end of the dive tried to move the group above the thermocline and got separated in thick kelp forest. Looked for Amy, Asher, and Tobias for 2 minutes, was about to surface and then foud them. Everyone followed stated separated dive buddy procedures. Well done.

Slightly overweighted.

DIVE NUMBER: 143

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Asher N.

First Family Dive! Kelp Forest dive transitioning to a wall dive that then descends into a gorgonian sea fan, rocky, grotto with overhead. Very nice dive with good visibility and many large fish. Generally a very good area for with multiple dive sites east of Blue Cavern Point. One of my favorite areas on the island for diving. This was a long swim from the boat anchorage, folks low on air at the end of the dive, yielding a long return surface swim. Amy's first dive on over a year. She did great. Both Asher and Tobias did great on the dive.

Slightly overweighted.

DIVE NUMBER: 141

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Asher N.

Kelp Forest dive. Heavy, stringy, kelp that was, at times, hard to navigate. Nice dive with good visibilty and many large Sheepshead and Calico Bass. Very large Calico at the end of the dive. Octopus. Site located in the Blue Cavern MPA. Asher handled the kelp extremely well even as it was snagging and impeding his motion.

Slightly overweighted.

Surface Interval: 1h 8min

DIVE NUMBER: 140

OVERVIEW

Type: Ocean, Boat Dive (SunDiver)

Partner: Asher N.

Nice dive along a shallow reef with stretches of sand. Asher's 3rd Open Water dive. Good kelp. Octopus, small halibut, lobsters. Small school of bait fish transit across and surround us on the give. Asher did great on air and has excellent buoyancy control. Good site, would return for it's approachability, structure, and wildlife.

Slightly overweighted.

4.16 Dive 139: Monarch Beach, Dana Point, CA, USA

DATE: 12 APRIL 2025

LATITUDE: 33°29'02.8"N

LONGITUDE: 117°44'00.2"W

DIVE NUMBER: 139

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Challenging dive, however, Tobias speared his first fish! Initially tried to dive Three Arch Bay but could not anchor safely because of swell and rocky lee shore. Relocated to Monarch Beach and anchored in 35 feet of water. Medium swell. Entered in sandy and rocky bottom with very poor visibility. Strong surge. Regulator free-flowing until I could get sensitivity valve adjusted. Visibility less than 1m, lower in portions near the northerly reef near sand/ rock interface. Dangerous conditions with surge pushing us onto unseen rocks. Some unseen/ unknown overheads became very dangerous. Very challenging dive. Near the end of the dive, as we headed southeast to return to the boat, came to an area with improved visibility. Tobias spent the latter portion of the dive in this area hunting. At one point we became separated because of surge and poor visibility. I back-tracked and we were able to reconnect. Tobias speared a legal Sandbass under a rock outcropping and we ended the dive. Ultimately a good dive with seriously challenging conditions.

LONGITUDE: 118°21'59.7"W

DIVE NUMBER: 138

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Great dive. Entered at Pirates Cove in sandy bottom and moved toward the rocky aggregates and kelp of Long Point. Forgot to take a bearing before descending in poor visibility in Pirates Cove. Headed the wrong direction before correcting course. Very cold on the bottom, should have used a hood. Consuming air like a PIG. Tobias found a pole-spear on the bottom in 10m just as we headed out. As we approached Long Point, saw a large Spider Crab, many fish. Moving north, spotted an octopus under attack by several fish! Insane wild-kingdom moment. The fish eased their attack as we approached and the octopus escaped under some kelp. Relocated the injured octopus to rock-sand interface. Ended the dive in kelp forest, always awesome. Tobias' fin failed causing us to abort the dive.

LONGITUDE: 118°19'35.3"W

DIVE NUMBER: 137

OVERVIEW

Type: Ocean, Beach Dive

Partner: Tobias N.

Dive in suport of the annual Avalon Harbor Underwater Cleanup. First dive of the season. Pulled approximtely 11 ponds of trash from the harbor bottom. Larger items: PFD storage bag, scuba mask and snorkel, dock line, cans and bottles. Issue with my low pressure actuator being stuck open at the begining of the dive. Lkely was salt as it cleared after removing and replacing the button. Octo was also slowly free-flowing. Dove on the octo vice the primary in order to not have to abort the dive. Lost a lot of air in the begining and through the dive becasue of these issues. Many large nudibranchs, interesting to see them in the harbor. Lots of bait fish.

DIVE NUMBER: 136

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Easy dive in Ripper's cove. Very enjoyable. Descend to sand flats then west to fringing rock reef. Transited along rock/ sand interface at 8 meters for most of the dive. Great visibility, many, many fish. On return, transited between 4 to 8 meters along the top of the reef. Many lobsters. Pacific octopus. leisurely, rewarding, dive that is very approachable. Will revisit.

LONGITUDE: 118°28'35.6"W

DIVE NUMBER: 135

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Iconic dive near Blue Cavern Point, SSE of the point. Down the anchor line to 29 meters. NNW along the deep sand/ kelp line to the rock wall SSE of Blue Cavern Point. Excellent visibility, many fish. Was hoping to see some big pelagics, did not materialize. Water warmer than expected. Once to the rock wall, ascended to the rich kelp forest and SSE through the kelp and rocks back to the boat. Perfect navigation. Had we seen some big pelagics, would have been a top 5 dive. Great dive, iconic kelp forest, Catalina dive. Love.

DIVE NUMBER: 134

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Good dive from along the outcrops of Hen Rock Reef. Poor visibility. Anchored in 18m of water. Hit sandy bottom at 18m and could not see the reef, headed SSE eventually finding the string of rocky outcrops. Alternating rocky outcrops and sand flats. Many, many, fish. Good kelp. Lobsters. Kelp and Sand Bass. Giant Black Sea Bass. Poor visibility made it difficult to keep track of the entire dive crew. Unable to locate the wreck and swim-throughs that are claimed at this site. Danny P. and Joel P. joined on the dive. Solid divers, nice to have them along.

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Valley of ashes. Strangely odd dive along the reefs/ wall between 4th of July Cove and Cherry Cove. Much marine snow gave the dive an eery feeling, giving a feeling of valley of ashes. Given the proximity to 4th of July Cove and Cherry Cove, there was also a lot of odd sounds from boat noise. Many large fish, that we were able to surprise becasue of the limited visibility. Horned Shark, many lobsters. Good stands of kelp. Strong thermocline at 18m.

DIVE NUMBER: 127

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Great dive. Entered the water, descending to sandy bottom in about 11m. Northward into kelp forest and rocky bottom grading deeper. Slowly turned west as we rounded Lion's Head. At depth, encountered large flat kelp laying on bottom. Tobias spotted 2 large spider crabs under the kelp and under a rock. As one came out from under the kelp so did a small Horn Shark, who settled on the kelp while we curiously investigated it. Moving west, encountered a large Lion's Mane Jellyfish ensnared in kelp. Further west, a school of 100's of Baracuda streamed by us as we floated mid-water. Began return, heading east, encounter a Morray Eel and Spiny Lobster. Very good dive.

Low pressure hose on my octo failed right before entering the water. I had swapped the hose onto my rig after Tobias had noted a slight leak from the hose when it was on his regulator the night before. Yikes. Removed my octo, plugged the port and dove with no back-up second stage.

Great dive, worked our way west from in front of the small beach toward Blue Cavern. Nice, thick kelp forest, rocky bottom, grading to sand in 20+ meters. In the kelp forest at 15 meters depth we spot a School shark one row of kelp away! Beautiful shark, approximately 6 feet in length. Shark was as surprised to see us, continued west for approximately 15 meters before going deeper into the kelp and turning around to investigate us. We hung motionless as the sleek creature circled us twice before heading north into the depths. Approximately half way through the dive we are inundated by a mixed school/ flood of fish. Then appears what appears to be another School Shark, clearly causing a panic among the fish population and driving them to shore. We see another (maybe the same) shark later in the dive. Rare, beautiful opportunity and encounter. Excellent dive with many fish and beautiful ecology and geology. Fortunate for this experience together.

4.32 Dive 123: Indian Rock, Catalina, CA, USA

DATE: 12 AUGUST 2023

LATITUDE: 33°28'06.0"N

LONGITUDE: 118°31'31.4"W

DIVE NUMBER: 123

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Second dive of the day in Indian Rock in Emerald Bay, Catalina. Another very good dive. Great dive site with varying ecosystems from sandy bottom to towering kelp forest to rock walled reef to jumbled rock and mixed sand. Good abundance of fish. Shark egg case. Pacific octopus putting on a show!

DIVE DETAILS

Maximum Depth:	15.1 meters
Bottom Time:	39 minutes
Dive Computer:	Yes
Starting Pressure:	150 bar
Ending Pressure:	50 bar

CONDITIONS

Visibility:	10 meters
Waves:	None
Current:	Light
Surge:	Light
Weather:	Sunny
Air Temperature:	24°C
Surface Temperature:	23.5°C
Bottom Temperature:	20°C

EQUIPMENT

Tank:	Aluminum 80
Weight:	22 lbs
Wetsuit:	Farmer John, Shorty, Booties

4.33 Dive 122: Indian Rock, Catalina, CA, USA

DATE: 12 AUGUST 2023

LATITUDE: 33°28'06.0"N

LONGITUDE: 118°31'31.4"W

DIVE NUMBER: 122

OVERVIEW

Type: Ocean, Boat Dive (Makai Mist)

Partner: Tobias N.

Nice dive around Indian Rock in Emerald Bay, Catalina. First boat dive off of Makai Mist, moored in closest row to Indian Rock, 2nd slot in from eastern most mooring. Transited counter-clockwise around Indian Rock, ending back at the boat. Excellent kelp forest, truly felt like a forest, with room to navigate at the base and a towering, full canopy above. Many typical fish, some very aggressive Garibaldi. Shark egg case. Diverse geology, sand, rock reef, jumbled rocks.

DIVE DETAILS

Maximum Depth:	18.3 meters
Bottom Time:	41 minutes
Dive Computer:	Yes
Starting Pressure:	220 bar
Ending Pressure:	130 bar

CONDITIONS

Visibility:	10 meters

4.34 Dive 121: Shaw's Cove, Laguna Beach, CA, USA

DATE: 7 AUGUST 2023

LATITUDE: 33°32'40.4"N

LONGITUDE: 117°47'57.5"W

DIVE NUMBER: 121

OVERVIEW

Type: Ocean, Shore Dive

Partner: Tobias N.

Shaw's Cove Roller Coaster

Beach dive at Shaw's Cove during a high tide. Intent was to dive the crevasse's at the west side of the cove. Breaking waves on the crevasses created strong surge and push/ pull through the narrow canyons. Typical beach dive that took a lot of energy to reach the actual dive spot. Fun rise through the canyons, at one point cresting a sill and then sucked down the face to the deepest point on the dive. Typical fauna. Some very large lobsters.

DIVE DETAILS

Maximum Depth:	13.4 meters
Bottom Time:	42 minutes
Dive Computer:	Yes
Starting Pressure:	220 bar
Ending Pressure:	70 bar

CONDITIONS

Visibility:	4 meters
Waves:	Medium
Current:	Medium
Surge:	Strong
Weather:	Sunny
Air Temperature:	24°C
Surface Temperature:	23°C
Bottom Temperature:	17°C

EQUIPMENT

Tank:	Aluminum 80
Weight:	23 lbs
Wetsuit:	Farmer John, Shorty, Gloves, Booties

Baja California Sur Isla Espiritu Santo Mexico

4.35 Dive 120: Isla Ballen Tail, Isla Espiritu Santo, BCS, MEX

DATE: 22 JUNE 2023
LATITUDE: 24°29'01.2"N
LONGITUDE: 110°24'31.9"W
DIVE NUMBER: 120

OVERVIEW

Type: Ocean, Boat Dive (Panga)
Partner: Tobias N.

Tail of the Whale: Tranquillo

Dove the western tail of Isla Ballena, a small island just south of Ensenada Candelero. Max depth 17.2 meters, bottom temperature 25 degrees. Landed in jumbled rocks, moving west along the sand-rock interface. Large school of Cortez Sea Chubs moving to deep water. Many nudibranchs, at least 4 types. Tobias observes a nudibranch, which is wrapped around a piece of seaweed, attack its own tail, extending its mouth onto itself. Giant Hawkfish. Green Eels. First part of the dive progresses like a cool sub-tropical Pacific dive, jumbled rocks, sea stars, sea cucumbers. As we ascend from 15 meters to 10 meters we pass through a sharp thermocline, schlerring, and the entire ecosystem transitions to a tropical environemnt, replete with colorful schools of fish and sand flats dotted by rocky outcrops. Stong current transitions the dive into a drift dive and we float, soar, along the sand flats observing the tropical aquarium.

Baja California Sur Isla Espiritu Santo Mexico

4.36 Dive 119: Fang Ming, Isla Espiritu Santo, BCS, MEX

DATE: 22 JUNE 2023

LATITUDE: 24°26'42.8"N

LONGITUDE: 110°22'52.5"W

DIVE NUMBER: 119

OVERVIEW

Type: Ocean, Boat Dive (Panga)

Partner: Tobias N.

Fang Ming: Revenge of the Tortugas

Dove the Fang Ming, a Chinese fishing trawler that was confiscated and subsequently sunk by the Mexican Navy for illegal fishing and human trafficking. Wreck dive, max depth of 21.3 meters, bottom temperature 26 degrees. Landed in sandy bottom at 21.3 meters, starboard side of the wreck. Always odd to see a massive ship sitting on the bottom of the sea floor. Forward to the bow, covered in sea fans. Around the bow, down the port side and up to 18 meters. Penetrated the port side, moving athwartships, exiting the starboard. Interior encrusted, many fish. Torch on, Tobias expertly navigates his first wreck penetration. Re-enter the starboard side and begin to move aft through what was likely crew living space and fish processing area, many large fish hiding in the corners, schools for Cortez Rainbow Wrasse. Tobias, again expertly navigates a confined space with limited overhead. Exit onto the stern deck, cargo holds open. Turtles lounging on the aft deck now own the ship that once likely illegally hunted them. From the center of the aft deck over the port rail and forward to the pilot-house, slowly peeking over the port rail we spot a massive, male, green sea-turtle. A green eel pokes its head out of a port hole. Through the port pilot house door, which is very tight, I get stuck for a moment. We have to go single file through the small pilot house. Many small Jewelled Moray Eels throughout the wreck living in pipes and crevases. Out the starboard pilot house door and to the bow, anchor windlass still intact, more sea turtles, one lounging on the bow mast-head, which we get to briefly swim with. Amazing dive.
